Vecoplan will present a world premiere at the K plastics trade fair, expanding its product portfolio in the processing of residual materials for the recycling industry:

Powerful performance – live

Vecoplan AG will present itself as a supplier of turnkey mechanical processing plants at K 2022, the leading business platform for the plastics and rubber industry in Düsseldorf (October 19-26). At two booths in Hall 9 and the Circular Economy Forum, the company will showcase solutions for establishing a functioning recycling management system to meet the increased demand for high-quality recyclates. Trade fair visitors can judge the company's performance first hand, with live broadcasts from the Technology Center in the Westerwald and live shredding in the outdoor area pavilion.

Many sectors in the plastics industry are undergoing a transition. Recycling is not only crucial for climate neutrality, but it also conserves valuable resources and the environment. The aim is to increase the recycling rate and use the advantages of plastic so that no damage is caused to the environment. Vecoplan's solutions are part of this value chain, and the company has been a successful and reliable partner to the recycling industry for years. The market has enthusiastically received Vecoplan's shredders. They can be perfectly adapted to the technical characteristics of plastics and the downstream recycling process while meeting stringent requirements for reliability and profitability.

Among other products, Vecoplan will showcase the robust and sophisticated VAZ 1700, a shredder that can tackle a wide range of entirely different materials. The company has many options for configuring and adapting the machine to the task at hand, and the VAZ 1700's throughput capacity ranges from 2,000 to 25,000 kilogrammes per hour, a crucial performance and quality factor in the shredding process. The Vecoplan development team has also given this shredder a modular basis – the outstanding feature of the new industrial design.

Visitors to the pavilion in the VDMA Circular Economy Forum (outdoor area CE 05) can experience how effectively this and other Vecoplan series shred very different plastics and

recycle them in a resource-saving manner. The live demonstrations will take place twice a day. Visitors can ask questions and converse with the Vecoplan experts.

One particular Vecoplan highlight at this year's K trade fair will be the launch of another plastics processing step. Visitors can find out more about this at both booths and via live links to the new Technology Center on the company's site.

Vecoplan supplies its customers with powerful individual machines and systems for processing a wide range of plastics. The company's specialists optimise material flows and match the components, achieving process stability, high energy efficiency and cost-effectiveness. Users also benefit from Vecoplan's cutting-edge know-how and international project experience.

Vecoplan at K: Hall 9, in Booth B41 and outdoor area CE05
